

LIST OF MASTERING POLARITY OF SPECIFIC LP MANUFACTURERS

For lovers of vinyl, such as ourselves, we provide this list of LP record manufacturers and the polarity they typically used when mastering their LPs. For those fortunate enough to own a phono-stage (such as the DSA Phono-One) or a line preamplifier with a polarity reversing switch, selecting the correct polarity for best playback will be easy. Otherwise, reversing the leads to your loudspeaker is the only other alternative. We realize that this list is not all inclusive, but it does include the majority of major LP companies. This list has been developed with considerable effort by Mr. Greg Weaver, www.theaudioanalyst.com, and has been kindly provided to DSA for our use. A greatly expanded list that provides polarity information for CDs, SACD and DVDs, as well as LPs, can be found at http://www.ultrabitplatinum.com/?page_id=198
